QUESTIONS

1.The stat has for sections

- Payin details (Count,Amount,Fee)
- Payin success overtime
- Payout details(count,amount)
- Balance

? To generate those stat we need API end point that return list of transaction with their status

2.Calculating fees

we can calculate the total fee using number of successful transaction * fee for single transaction

? what is the fee for a successful transaction

3.Total vs Available balance

It is understood that available balance mean the amount can actually withdrawn transferred, or use right now. and total balance is the sum of all the money in the account

? In this specific context what is the EXACT difference between them and the balance we show using the / external/balance/status Available or Total balance
